

Performing a Sale in Odoo POS System

This article teaches you how to perform a sale and process payments in the Odoo POS system.

Prerequisites

Before you proceed to perform a sale, make sure:

- You are logged into the latest version of the Odoo application on an Android, iOS, or Windows device.
- You have necessary user permissions to perform sales and handle payments.
- The products you want to sell are created and available in the POS system. Refer to the product setup guide to create products and product categories.

1. Start a POS Session

1.1 Click **New Session** to activate your POS session.

Note: You can log in from different user accounts, but you can open only one session per browser.

2. Choose Your Store

2.1 Click **Point of Sale** from the Odoo dashboard.

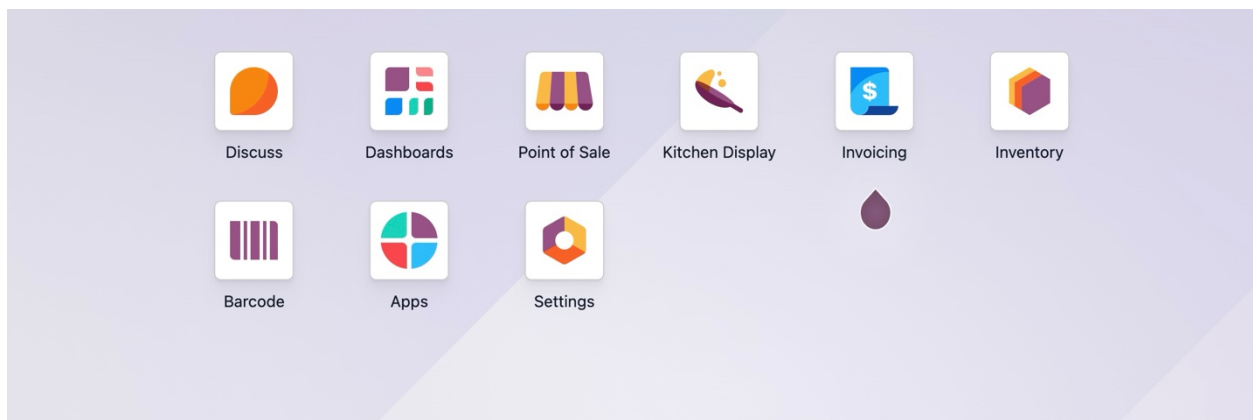

Figure 1. Odoo dashboard showing the POS application

2.2 Review the list of stores displayed on the screen.

Note: Each store functions as a separate business unit in the POS system.

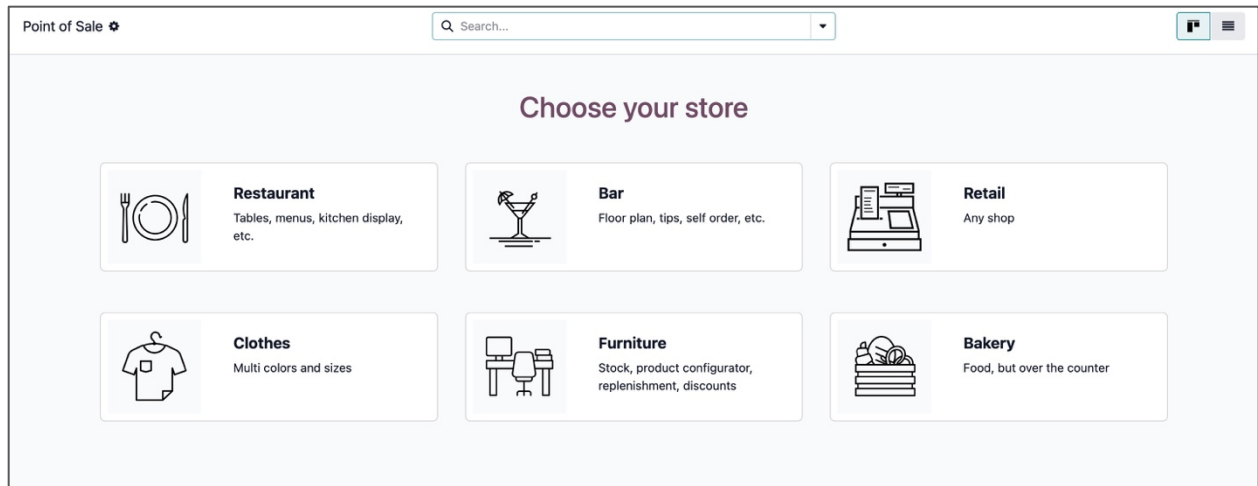

Figure 2. List of Stores displayed in the POS application.

2.3 Select the store where you will make the sale.

Example: Select **Restaurant** if that is where you work.

3. Set Up Cash Register at the Store

3.1 Click **Open Register** for the selected store.

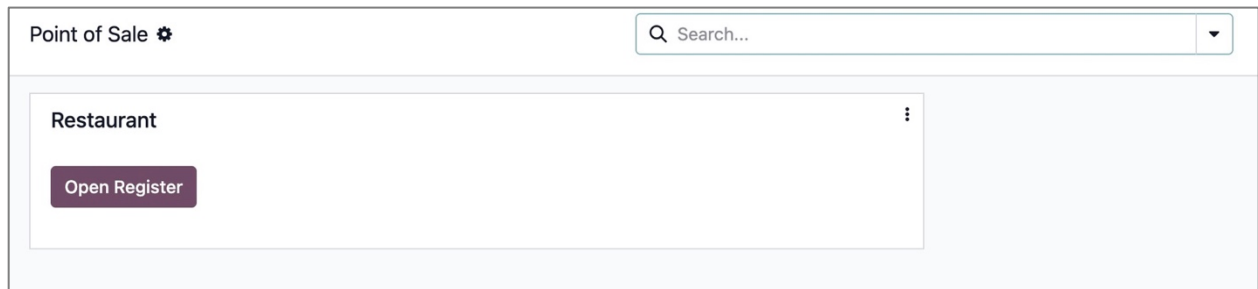

Figure 3. The **Open Register** option displayed in the selected store

3.2 Once inside the store, click the **Money** icon in the **Opening Control** window.

3.3 Enter the number of notes and coins you have.

Example: Enter **10** under **\$200** for ten 200-dollar notes and **10** under **\$1** for ten 1-dollar coins.

Coins/Notes
×

−	10	+	\$ 200.00	−	10	+	\$ 1.00
−	0	+	\$ 100.00	−	0	+	\$ 0.50
−	0	+	\$ 50.00	−	0	+	\$ 0.25
−	0	+	\$ 20.00	−	0	+	\$ 0.20
−	0	+	\$ 10.00	−	0	+	\$ 0.10
−	0	+	\$ 5.00	−	0	+	\$ 0.05
−	0	+	\$ 2.00				

Confirm

Total \$ 2,010.00

Figure 4. The **Coins/Notes** pop-up where the opening cash amount is configured.

3.4 Click **Confirm** to save the amount.

Tip: Always verify your opening cash carefully so end-of-day calculations stay accurate.

3.5 Click **Open Register** again to complete the register setup.

4. Start a New Order

4.1 Click **New Order**.

Note: Dine-In is selected by default. Tap the **Dine-In** option to switch to **Takeaway** if the customer prefers.

4.2 Select a product category to view its items. Example: Select **Foods** to view all food items.

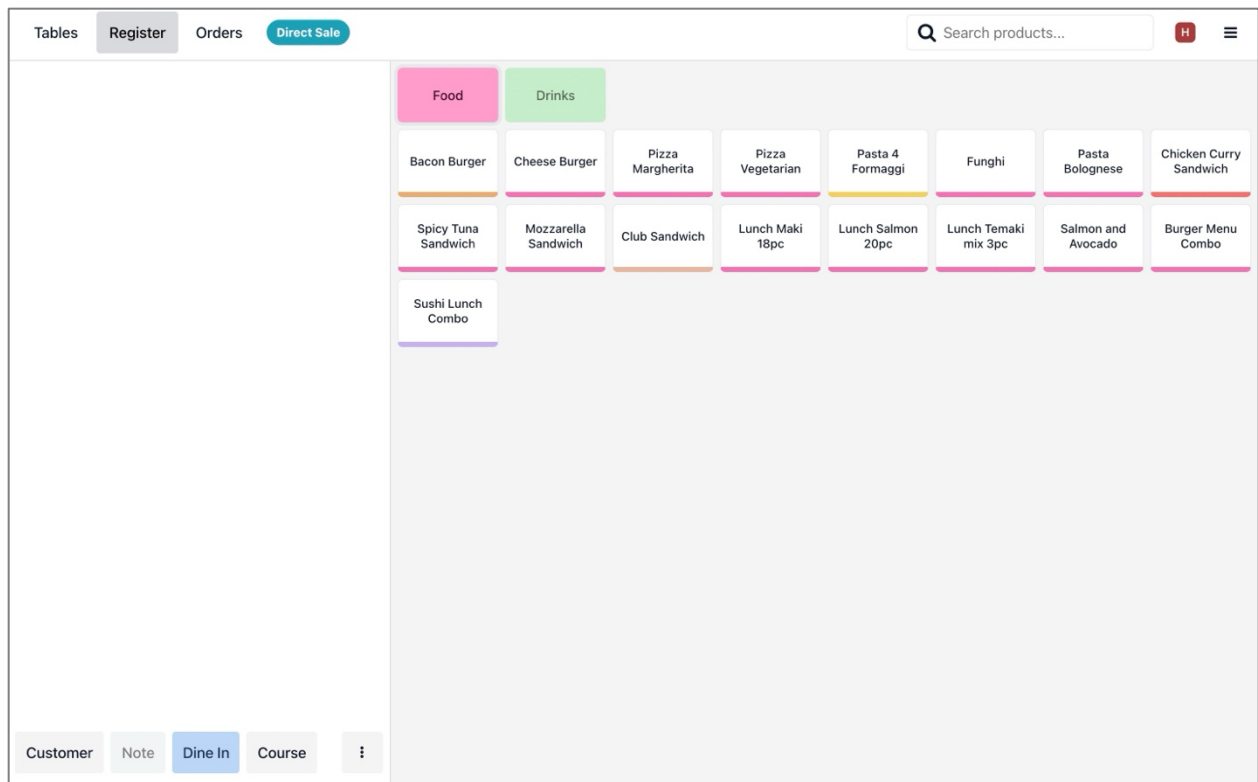

Figure 5. The order screen displaying the product categories and products.

4.3 Scroll through the order screen to select the item you want.

Note: If you do not see the item on the screen, click **Search Products** at the top.

4.4 Select the item the customer wants to order. Example: **Bacon Burger**. If sides or add-ons are available, a pop-up appears.

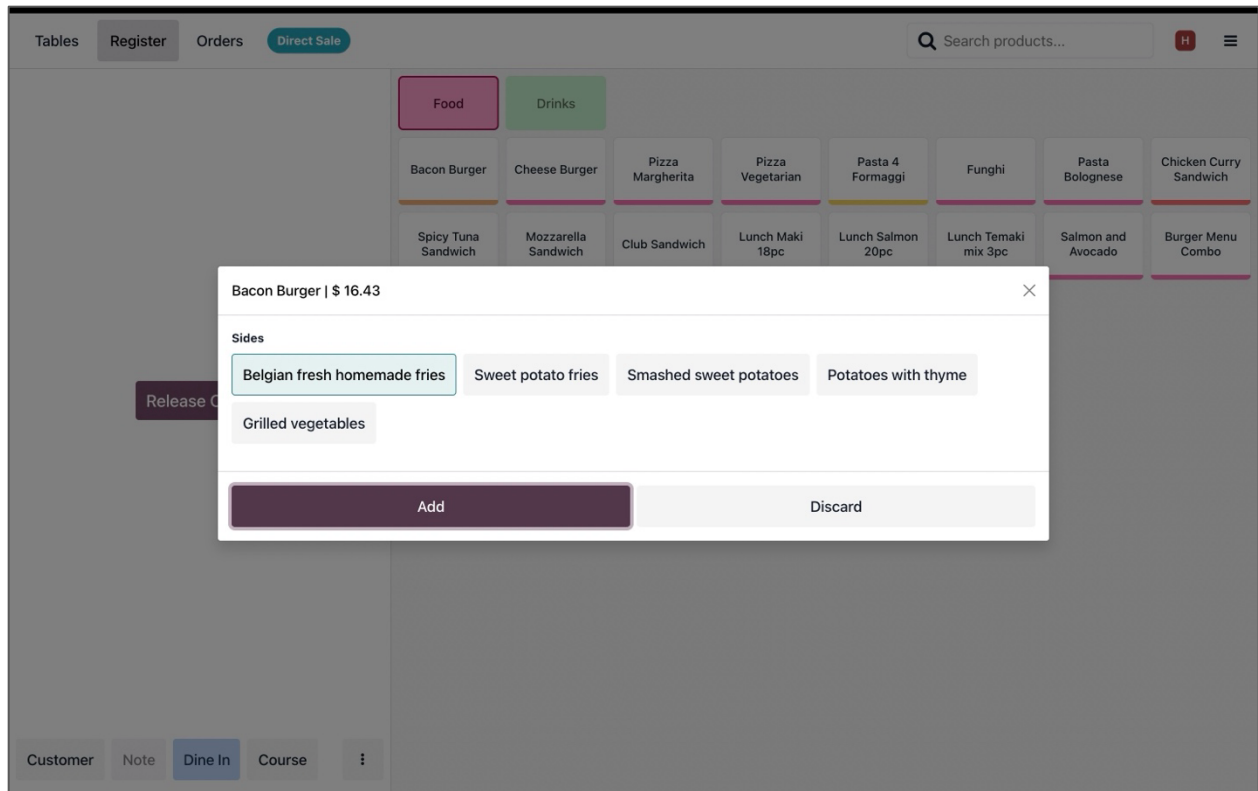

Figure 6. The slides/add-ons pop-up appearing when the product is selected

4.5 Select the sides or add-ons. Example: **Fries**.

4.6 Click **Add**. The Bacon Burger with Fries appears in the cart.

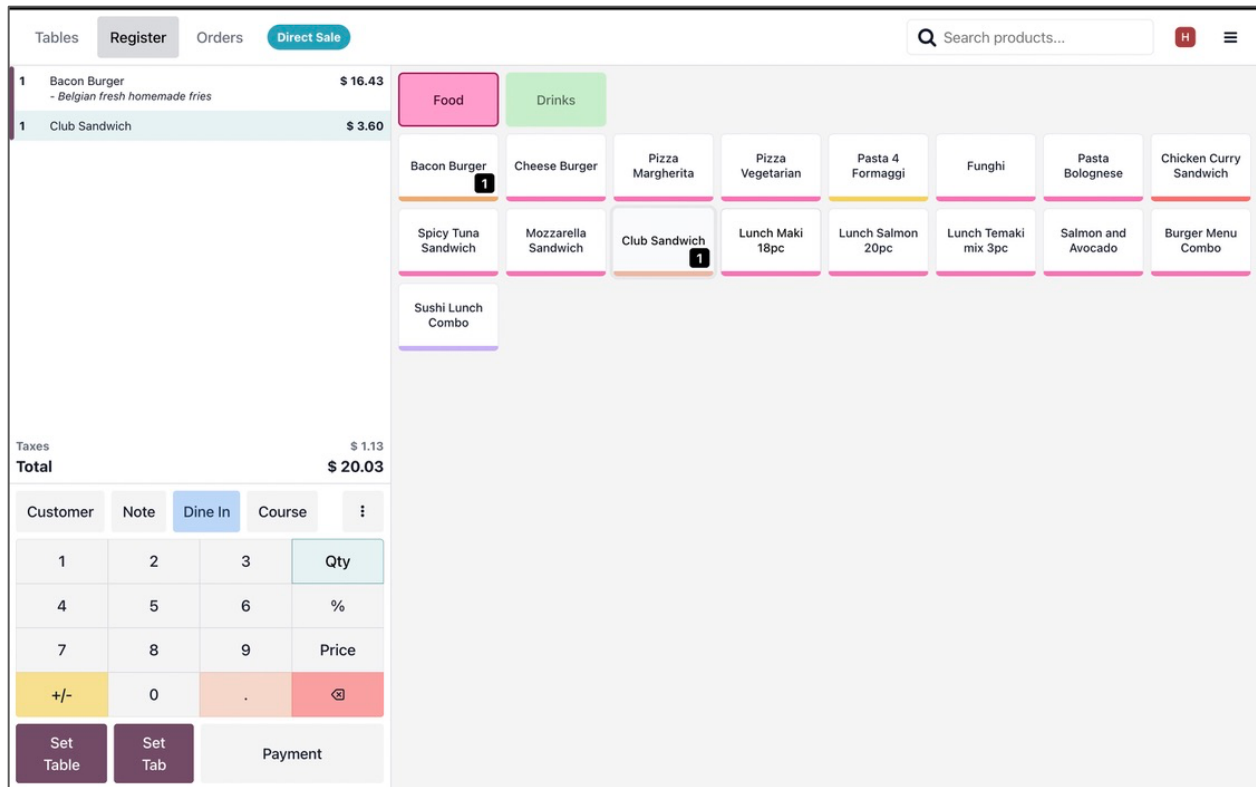

Figure 7. The selected products added in the cart with the quantity shown in the order screen buttons.

Optional Steps

4.7 To change quantity, select the item in the cart.

4.8 Click **Qty** and enter the new quantity using the keypad. Example: If the customer wants 2 bacon burgers, increase the quantity from 1 to 2.

4.9 Click **Price** and enter a custom price if required.

Warning: Item price cannot be zero or negative.

5. Add a Customer

5.1 Click **Customer** in the keypad area.

Tip: If it is a returning customer, their name may appear in the list automatically.

5.2 Click **Create** to add a new customer.

Tip: You can update or delete existing customer details if needed.

Figure 9. Payment methods displayed along with the order total.

6.2 Select the customer's preferred payment method. Example: Choose **Cash** if the customer wants to pay with cash.

Tip: The system automatically supports split payments.

6.3 Enter the amount the customer wants to pay. Example: If the total is \$21 and the customer pays \$10 in cash and \$11 by card, enter **10** under Cash. The system shows the remaining balance. Then select **Card** and enter **11**.

6.4 Click **Validate**. The system confirms the payment and displays the invoice.

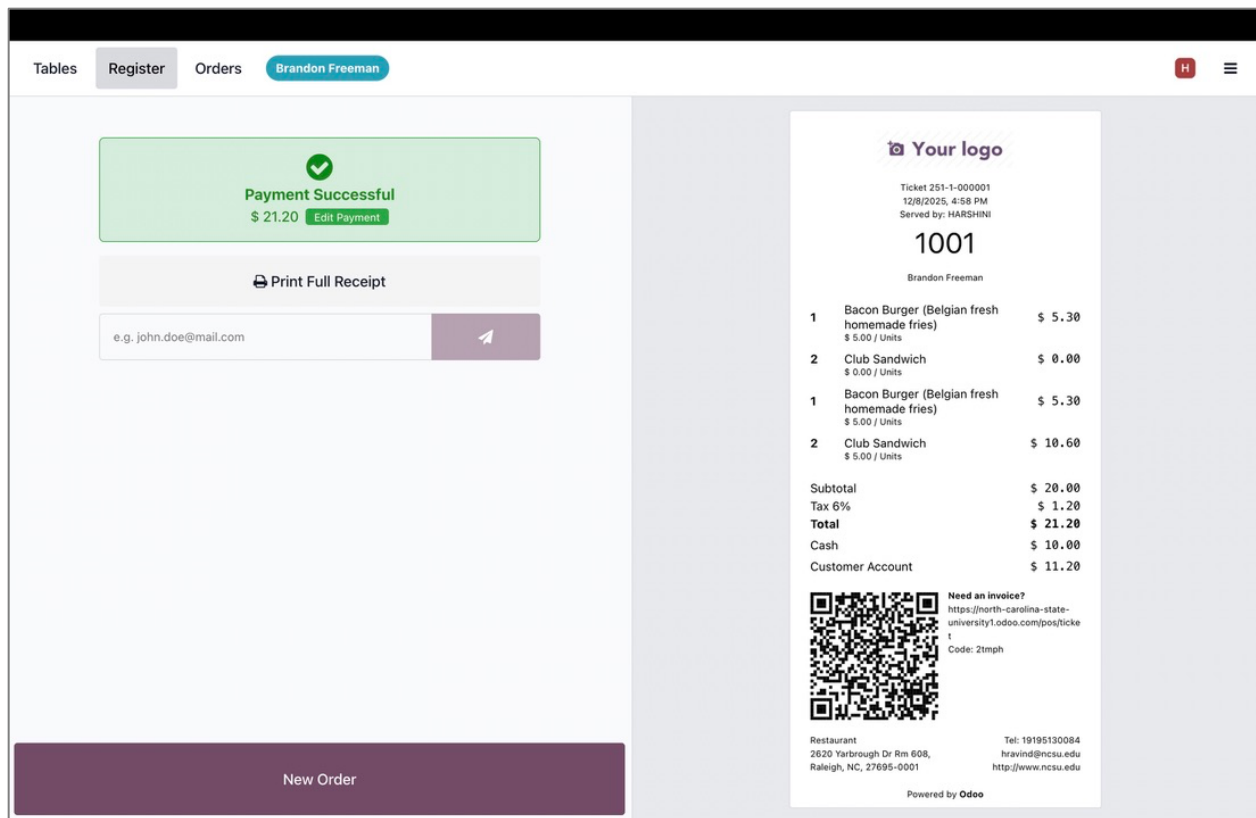

Figure 10. Payment successful alert appearing after completing the payment.

7. Print or Send the Receipt

7.1 Click **Print Full Receipt** to print the invoice.

7.2 If the customer prefers a digital copy, enter their email address or let them scan the QR code.

7.3 If this is your last order of the day, click **Close Register**.

Additional Resources

Refer to [POS tutorials](#) for elaborate information on product creation, invoicing, and cash handling in the Odoo POS system.

Generating Reports in Odoo POS System

This article teaches you how to generate, customize, and export reports in the Odoo POS system.

Prerequisites

Before you generate a report, make sure:

- You are logged in to the latest version of the Odoo POS application on your Android, iOS, or Windows device.
- You have necessary permissions to view and generate reports.
- A POS session is already open, as Odoo generates reports only for active or completed sessions.

1. Start a POS Session

1.1 Click **New Session** to open your POS session.

Note: You can generate reports only when at least one POS session is active or has recorded transactions.

2. Select Report Type

2.1 Click **POS** from the Odoo dashboard.

2.2 Click **Reporting** on the POS dashboard.

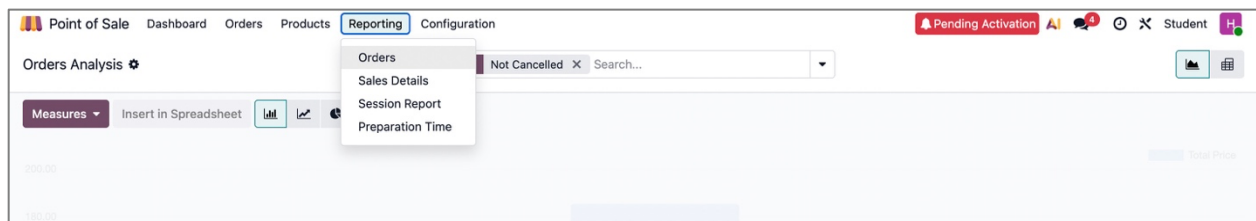

Figure 11. Reporting screen displaying the available reports.

2.3 Review the list of available reports:

- **Orders** - Shows details of every order created during the session.
- **Sales Details** - Shows item-wise sales information for the selected date.
- **Session Report** - Summarizes all actions performed in an active POS session.
- **Preparation Time** - Shows the time taken to prepare each order placed during the active POS session.

2.4 Select the report you want to generate. Example: Select **Orders** if you want information about orders created during the session.

3. Input Values to Generate Each Report

Tip: Each report type can be generated independently.

3.1 Generate Orders or Preparation Time Report

3.1.1 Select **Orders** or **Preparation Time**.

3.1.2 Click **Print**.

Note: These reports do not require additional input. Odoo automatically uses data from the active session.

3.2 Generate Sales Details Report

3.2.1 Select the **start date** and **end date** using the calendar.

Note: The system automatically selects today's date by default.

Sales Details

Start Date: 09/12/2025 04:41:33 am

End Date: 9 Dec, 4:43 am

Point of Sale: Restaurant

Add a line

Calendar: December 2025

S	M	T	W	T	F	S

50	7	8	9	10	11	12
51	14	15	16	17	18	19
52	21	22	23	24	25	26
1	28	29	30	31	1	2
2	4	5	6	7	8	9

4:41am

Apply

Print Cancel

Figure 12. Calendar screen showing the dates to select for report generation.

3.2.2 Click **Apply**. A summary of transactions for the selected date appears.

3.2.3 Click **Print** to download the report as a PDF file. Example: Select January 10 to January 10 to view only today's sales.

3.3 Generate Session Report

3.3.1 Select the POS session you want to review from the list.

Example: Select **Session 0125** to view all actions performed during that session.

3.3.2 Click **Print** to download the report as a PDF.

Note: If no sales or activities occurred in the session, the message **No Data to Display** appears.

4. Customize Reports

4.1 Click **Measures** to adjust the information displayed in your report. Example: Select **Total Price** to display the total revenue generated from each product category.

4.2 Click **Ascending** or **Descending** to sort the report data. Example: Sort by **Quantity Sold** in descending order to identify best-selling items quickly.

5. Export and Visualize Reports

5.1 Click **Insert in Spreadsheet** to export the report to a worksheet. Example: Use this option to perform further analysis in Excel or Google Sheets.

5.2 Click **Bar Chart**, **Pie Chart**, or **Line Chart** to visualize your report. Example: Select **Pie Chart** to compare product category sales as percentages.

Additional Resources

Refer to [Reporting](#) for elaborate information on analyzing and visualizing the data of your POS records.

Managing Inventory in Odoo POS System

This article explains how to manage inventory in the Odoo POS system.

Prerequisites

Before updating inventory, ensure the following:

- You are logged in to the latest version of the Odoo POS application on your Android, iOS, or Windows device.
- You have permission to view and manage inventory.
- Your physical inventory matches the products created in Odoo POS.

Product Requirements

- Create a product in Odoo POS for every item in your physical stock.
Warning: If a product is not created, it cannot be sold at the POS.
Example: If you have *Bacon Burger* in stock but did not register it in the inventory, it will not appear on the order screen.
- Enter accurate product details such as price, tax, category, and quantity.
Warning: Incorrect prices or tax settings may cause customer overcharging or accounting errors.
Example: Setting a \$12 sandwich to \$8 or applying 0% tax instead of 7% creates incorrect sales reports.
- Select the **Point of Sale** checkbox when creating products to make them available for sale.
Warning: If this box is not selected, the product will remain invisible on the POS order screen even if it is available in inventory.

1. Access the Inventory Module

1.1 Select **Inventory** from the Odoo dashboard to begin managing stock quantities.

Note: This must be done from the backend, not the POS sales screen.

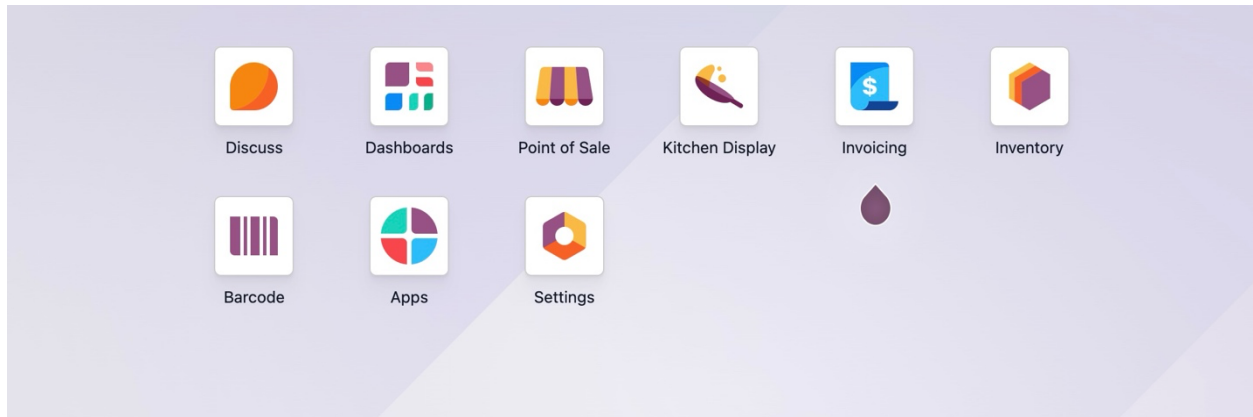

Figure 13. Odoo dashboard showing the Inventory Module.

2. Create Inventory Adjustment

2.1 Navigate to **Operations** → **Physical Inventory** → **Adjustments** → **Physical Inventory**.

Note: If this is your first adjustment, the inventory list may appear empty until quantities are entered.

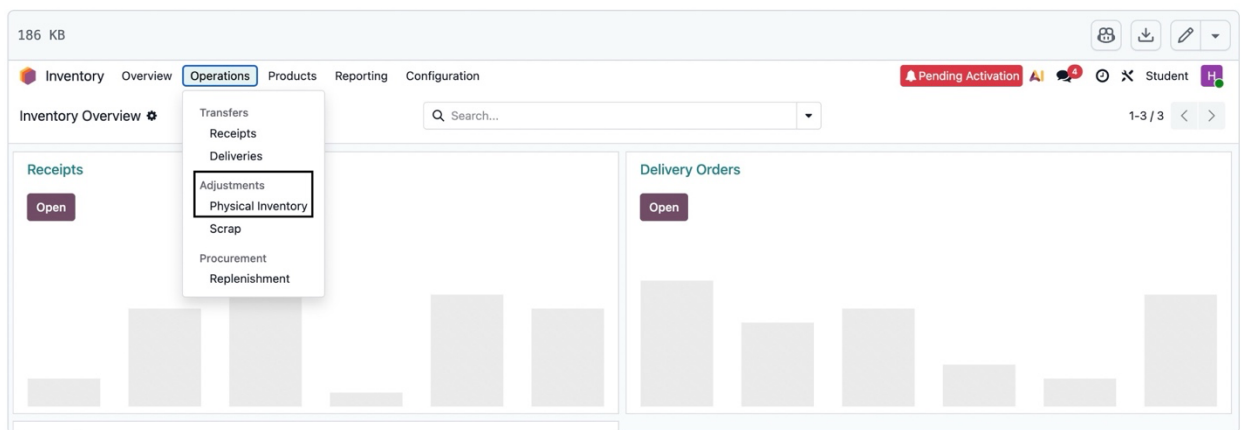

Figure 14. The Inventory adjustments option displayed under **Operations**.

3. Set Product Quantities in Inventory

3.1 Click **New**.

3.2 Under **Product**, select the item you want to update.

Note: If no products appear, create them in the POS product list first.

3.3 In the **Counted Quantity** field, enter the exact physical stock count.

Example: Enter **6** if you have 6 Bacon Burgers, enter **24** if you have 24 water bottles, enter **0** if an item is out of stock.

Important: Counted Quantity must match your actual physical stock.

3.4 Click **Apply** on the far right to save the adjustment.

4. Review the Adjustment

4.1 Check the **Counted Quantity**, **On-Hand Quantity**, and **Difference** fields:

- **Green:** Counted quantity is higher than on-hand. **Example:** On-hand 4 counted 6 → +2 (green).
- **Red:** Counted quantity is lower than on-hand. **Example:** On-hand 10 counted 7 → -3 (red).
- **Blank:** Quantities match. **Example:** On-hand 12 counted 12 → no difference displayed.

Note: This step is important because it confirms that the physical count matches the system record, preventing stock errors that could lead to inaccurate sales and inventory discrepancies.

5. View the Adjustment History

5.1 Click **History** to view previous inventory adjustments. The user who performed the count appears in parentheses in the **Reference** field. The user who applied the adjustment appears under **Done By**.

Note: Offline POS devices cache inventory adjustments and sync them once reconnected.

Warning: If syncing fails, stock levels may become inaccurate.

Example: If you mark an item as 0 units while offline, POS may still show 3 units until a successful sync occurs.

Additional Resources

Refer to [Inventory Adjustments](#) for more information on matching inventory counts in the warehouse and avoiding count discrepancy.

Applying Discount on Products in Odoo POS System

This guide teaches you how to apply discounts and offers to orders in the Odoo POS system.

Prerequisites

Before you proceed to apply discounts on a product, make sure:

- You are logged into the latest version of the Odoo application on your device.
- You have permission to apply discounts and offers on orders.
- The **Loyalty Program** setting in the Odoo dashboard is enabled so discounts will work correctly.

1. Start a POS Session

1.1 Click **New Session** to open your POS session.

Note: You can open only one POS session per browser at a time.

2. Enable the Loyalty Program

2.1 Click **Point of Sale** from the Odoo dashboard.

2.2 Click **Configuration**.

2.3 Turn on the **Loyalty Program** option under **Pricing**.

Note: Discounts can only be applied if this setting is enabled.

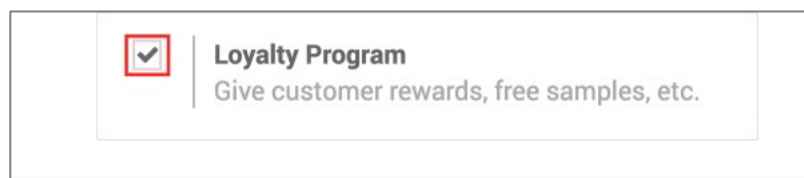

Figure 15. The Loyalty Program setting selected to apply discounts.

3. Choose Your Store

3.1 Click **Point of Sale** from the Odoo dashboard.

3.2 Review the list of stores shown on the screen.

Note: Each store works independently, so discounts apply only to the store you select.

3.3 Select the store where you will make the sale.

Example: Select **Restaurant** if you are processing orders at the restaurant location.

4. Start a New Order

4.1 Click **New Order**.

4.2 Select a product category to view its items.

Example: Tap **Foods** to see all food items.

4.3 Scroll through the screen to find the item you want.

Note: If you cannot find an item, click **Search Products** at the top.

4.4 Select the product the customer wants. Example: Tap **Bacon Burger**.

4.5 Click **Add**. The item appears in the cart.

5. Add a Customer

5.1 Click **Customer** in the keypad area.

Note: Adding a customer is required before applying discounts. This ensures only customers with loyalty benefits are provided with discounts.

5.2 Click **Create** to add a new customer if needed. Example: If a returning customer changed their phone number, update it here.

Note: You can update or delete customer information from this screen.

5.3 Enter the customer's details.

5.4 Click **Save**. The customer's name now appears in the cart.

6. Apply a Discount to a Product

6.1 Select the item in the cart that needs a discount.

Note: Make sure you select the RIGHT item before applying the discount.

6.2 Click the **Discount** button on the keypad.

Note: If the **Discount** button does not appear in the keypad, ensure the **Loyalty Program** setting is turned on.

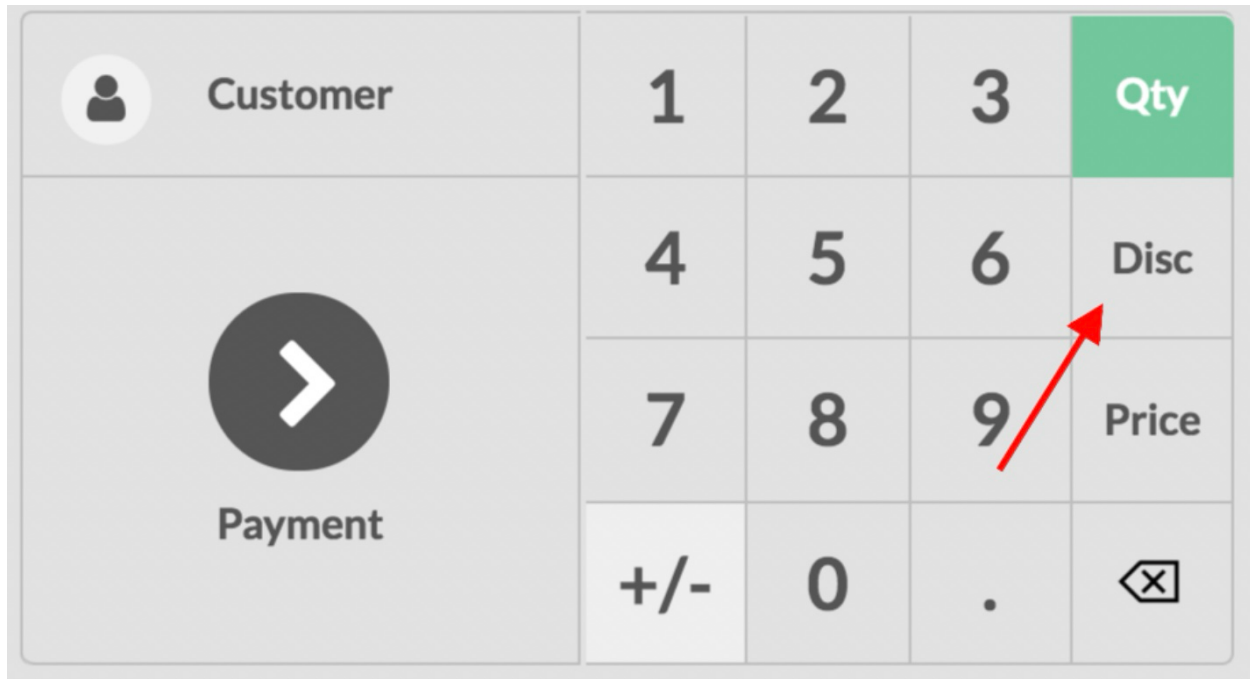

Figure 16. The Discount button in the keypad which is used to apply discount on products in cart.

6.3 Enter the discount amount using the keypad. Example: Enter **10** if you want to apply a **10 percent** discount.

6.4 Tap the % key to apply the percentage discount. The product price updates automatically.

Tip: Use the **Global Discount** option if the customer has a coupon that applies to the entire order.

Additional Resources

Refer to [Global Discounts](#) for more information on applying global discounts in the POS interface.
